

Xana Life website

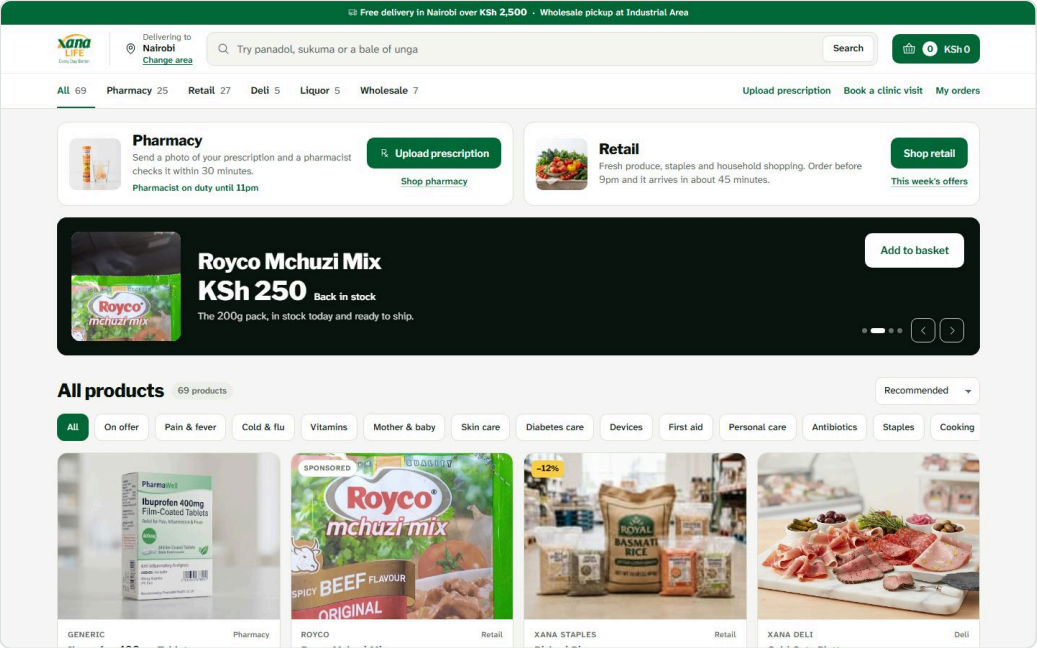

One online shop for Pharmacy, Retail, Deli, Liquor and Wholesale in Nairobi. This document shows the design of the website and how a shopper moves through its 19 screens.

9 October 2026 69 products · 5 divisions · 19 screens

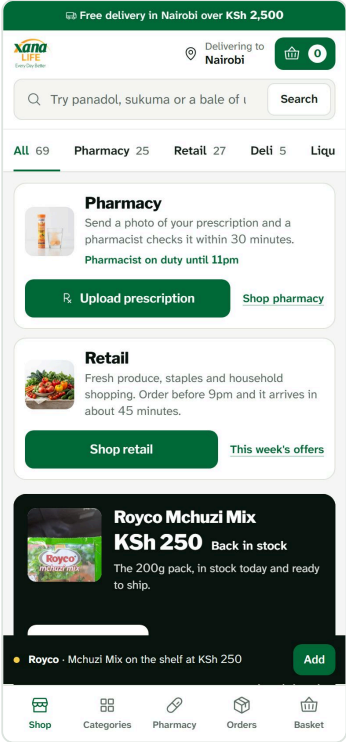

The design

- **Simple, products first.** The page runs from the header and division tabs to one row with Pharmacy and Retail, the offers banner and then the product grid. There are no decorative sections or animation.
- **Pharmacy stands out by position, not size.** It is the first card and the first product, with "Upload prescription" and the pharmacist's hours. Retail has the same size card.
- **One look for every product.** Each card shows the brand, name, pack size, price and one "Add to basket" button. Wholesale cards also show the bulk price tiers.
- **One accent colour.** Green is used for buttons and active states. Yellow appears only on discount badges.
- **Paid ads follow fixed rules.** They appear in the offers banner, the second grid slot (labelled "Sponsored"), search results and category strips. Prescription-only medicine is never advertised. Liquor is advertised only after the 18+ check.

The home screen

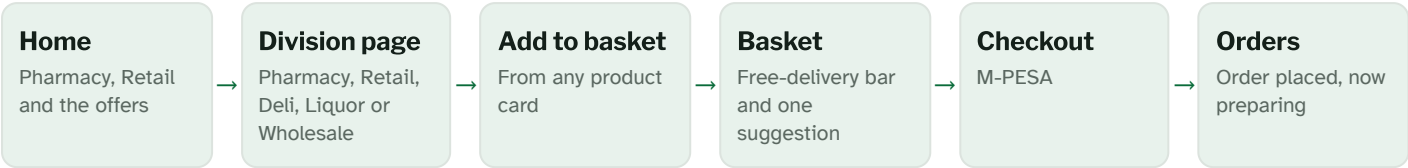

Desktop. Header with delivery area, search and basket; division tabs; Pharmacy and Retail cards; the offers banner; then the products.

Phone. The same page in one column, with a bottom bar for Shop, Categories, Pharmacy, Orders and Basket.

How a shopper moves through the screens

THE MAIN PATH

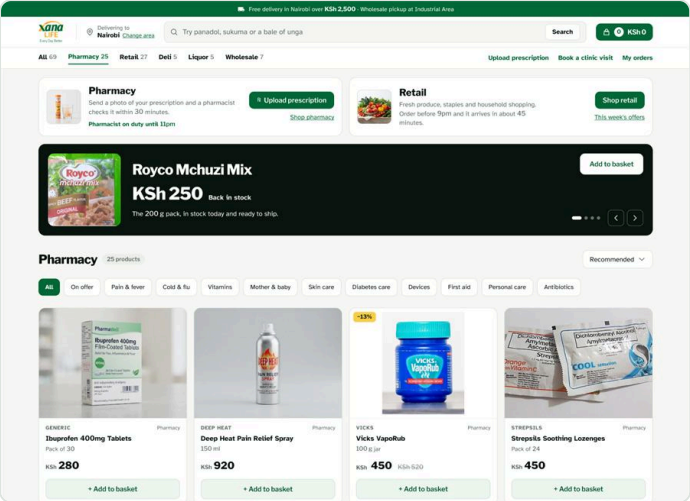

EVERY JOURNEY

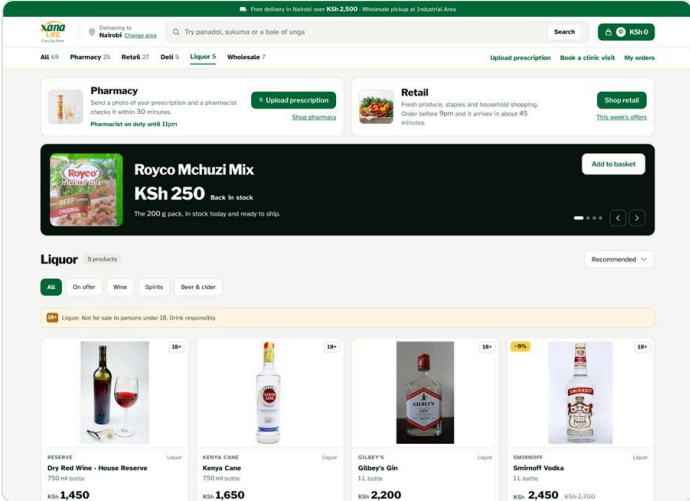

JOURNEY	SCREENS, IN ORDER
Shopping	Home → division page → category chips → product card → Basket → Checkout (M-PESA) → Orders
Finding a product	Search in the header → Search results, or No results when nothing matches
Liquor	Liquor tab or an "Add" on a liquor product → Age check → Liquor page (with the under-18 notice)
Prescriptions	"Upload prescription" → Upload a prescription form → Prescription received
Clinic visits	"Book a clinic visit" → Book a clinic visit form
Delivery area	"Change area" in the header → Delivery area picker
On a phone	Bottom bar → Categories, Basket (or Empty basket) and Orders (or No orders yet) open as sheets from the bottom; "Added to basket" confirms each add

The screens

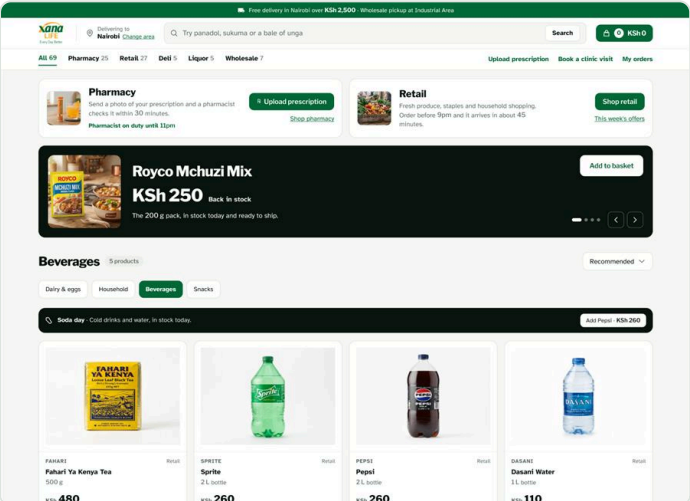

BROWSING

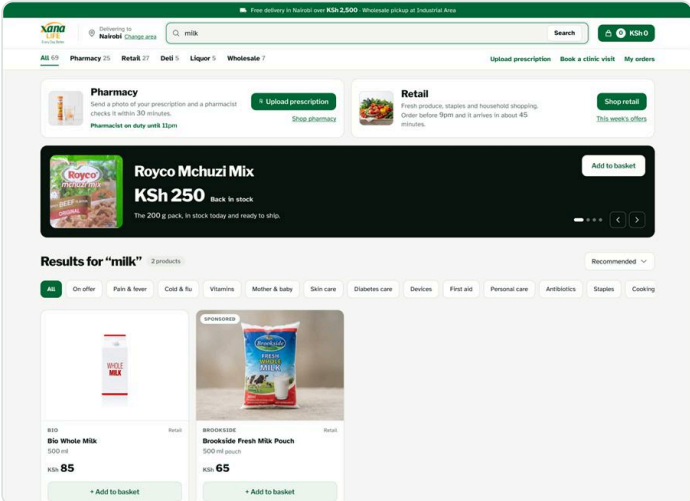

Pharmacy. Twelve products. A prescription-only item shows "Upload prescription" in place of "Add to basket".

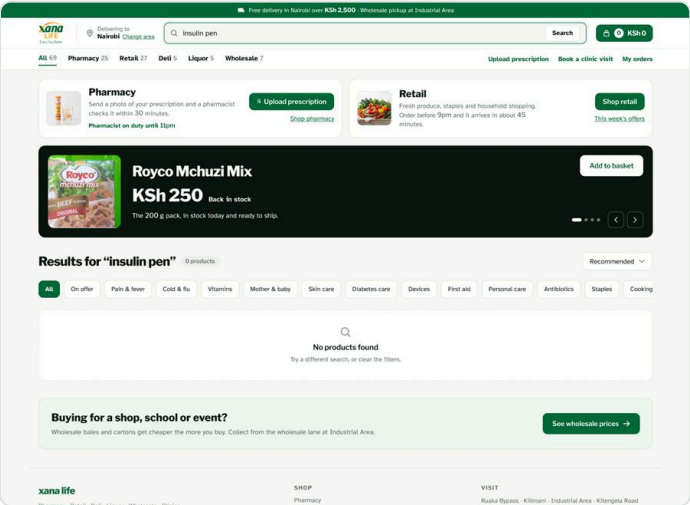

Liquor. Every card is marked 18+, with an under-18 notice above the grid.

Beverages. A category page with the "Soda day" sponsored strip above the grid.

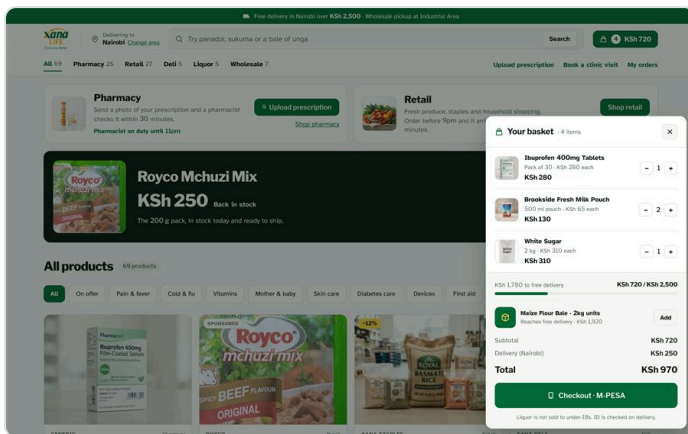

Search results. The paid slot is labelled "Sponsored" and sits second.

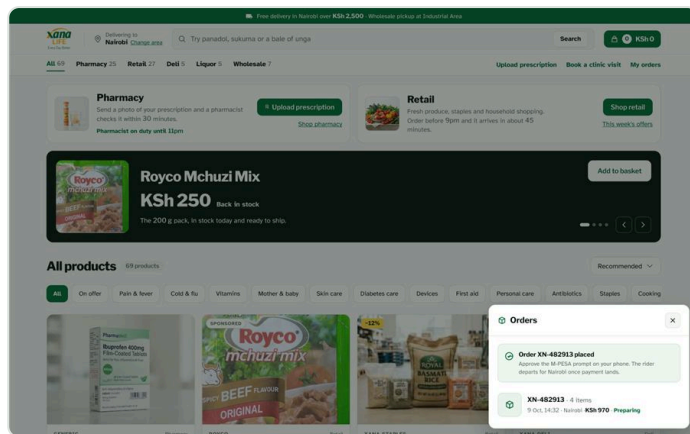

No results. A plain message and nothing else.

BASKET AND ORDERS

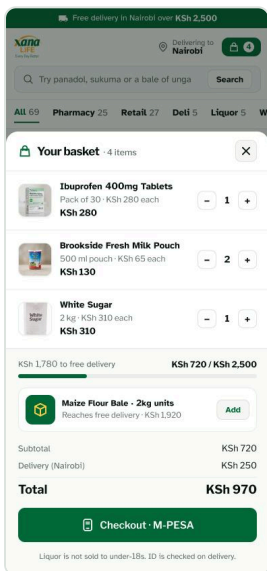

Basket, desktop. A free-delivery progress bar, one top-up suggestion and M-PESA checkout.

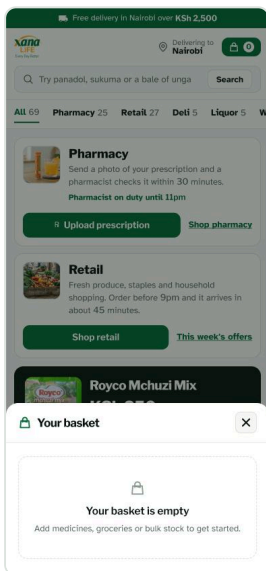

Orders. What the shopper sees right after paying.

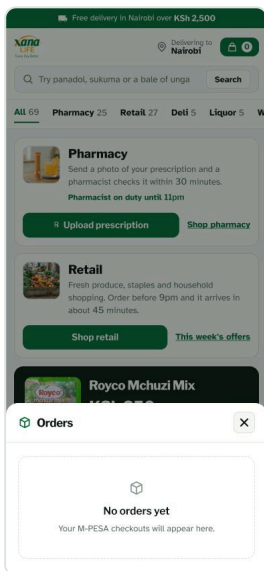

ON A PHONE

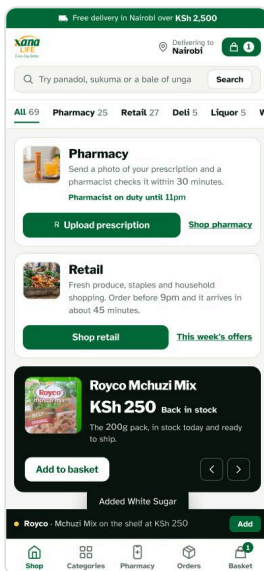

Basket.

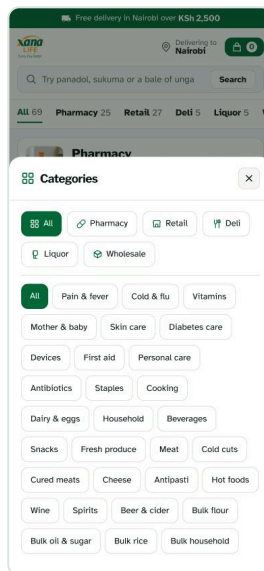

Empty basket.

No orders yet.

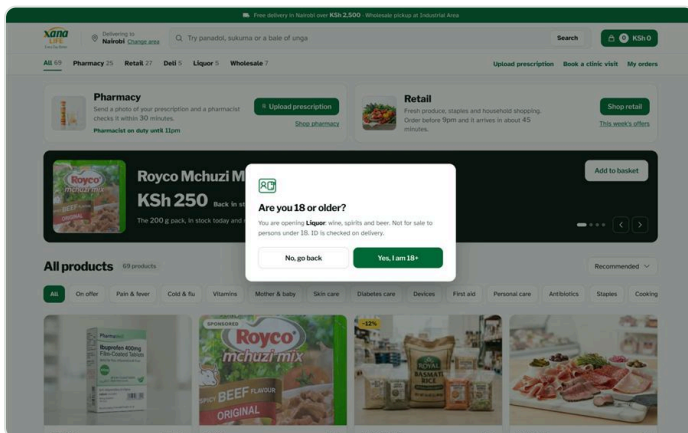

Added to basket.

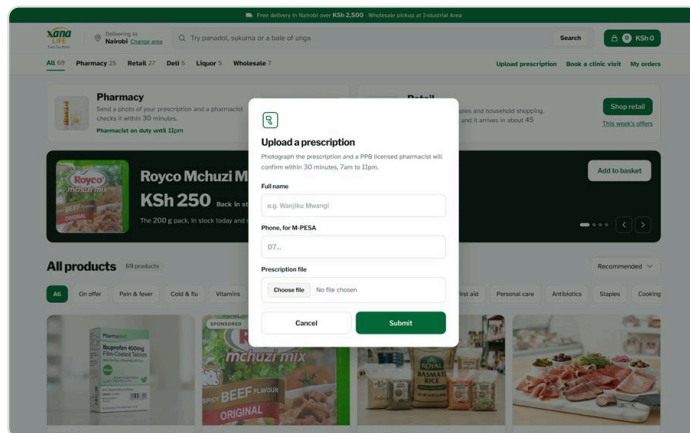

Categories.

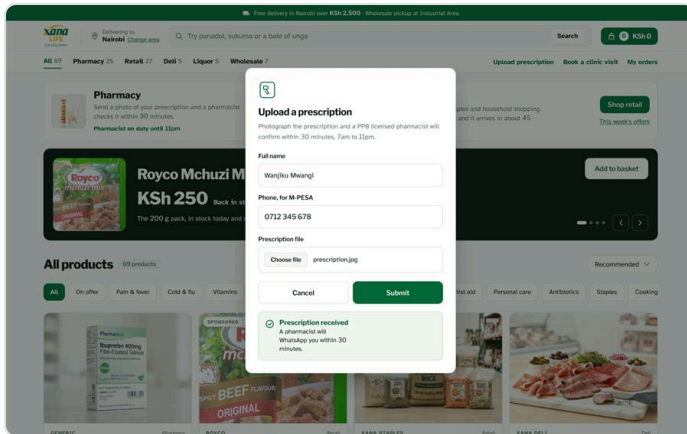

CHECKS AND FORMS

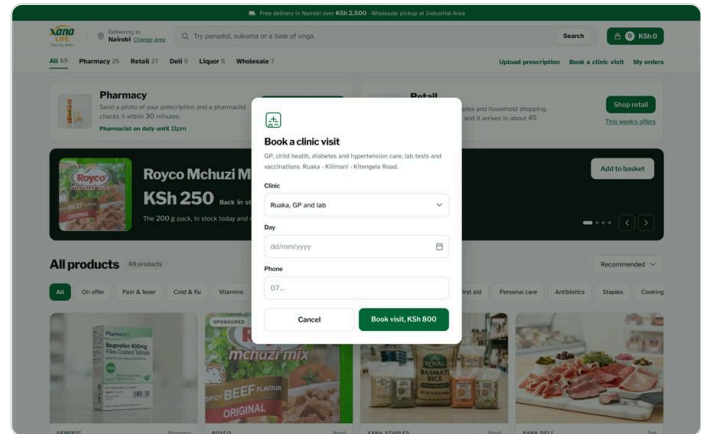

Age check. Shown before the Liquor division opens.

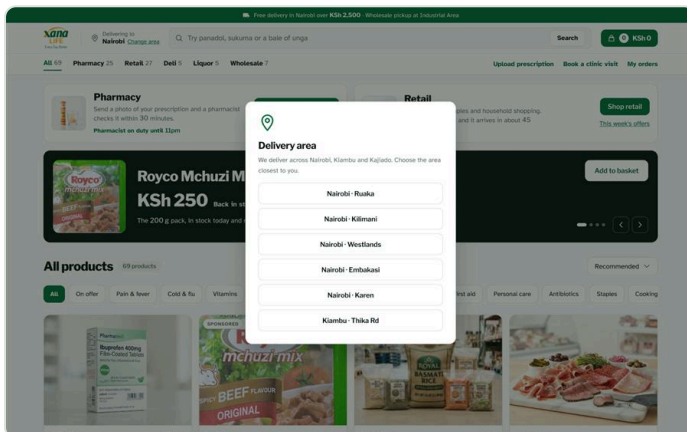

Upload a prescription. Name, phone for M-PESA and the file.

Prescription received. A pharmacist replies on WhatsApp within 30 minutes.

Book a clinic visit. Three clinics, KSh 800 a visit.

Delivery area. Six areas across Nairobi and Kiambu.
